

SmallThings

v1.5.1 — small tickable quality-of-life options for the Uncapped server (WoW 3.3.5a). Tick what you want, ignore the rest. by **Mhortai**

Instant destroy **OFF**

Deleting never asks — all confirmations skipped, even the type-DELETE box. No safety net: epics die as fast as greys.

Alt+Right-click item menu **ON**

Menu on bag items: **Equip** · **Stash to Vault** (server decides, refusals in chat) · **Split**. Normal clicks untouched.

Auto-sell whites **OFF**

Sells EVERY white with a sell price — gear, consumables, mats, recipes. Buyback holds only 12 items; tick deliberately.

UI error spam filter **ON**

Mutes “not enough rage/mana/energy” and “not ready yet” spam. Real errors still show.

Class-colored chat names **ON**

Names in all chats colored by class via the client's native flag. Colors once the client has seen that player.

Chat timestamps **ON**

Grey hh:mm before every chat line (combat log excluded). Instant on/off for new lines.

Show IDs in tooltips **ON**

Item, Enchant, Spell (incl. buffs/debuffs) and Talent IDs on tooltips. Replaces IDTip — delete that folder.

Auto-sell greys **ON**

All greys sold when a vendor opens. One summary line per visit, only if something sold.

Max camera zoom **ON**

Camera cap raised to the client max (50) vs the slider's 15. Untick to restore.

Crisp graphics **OFF**

Past the video sliders: view distance 1277, dense clutter, full weather, 8x AA (next login). Restores YOUR old values on untick. Costs FPS.

Minimap button **ON**

A cog on the minimap rim — click for options, drag to move. Untick to hide; /smallthings always works.

Auto-reset dungeons **OFF**

Leaving a dungeon sends the server's .reset automatically — instant farm resets. Server reply confirms or refuses.

Install: drop the SmallThings folder into Interface\AddOns and restart the game fully (a /reload is not enough after installing or updating). **Options:** Interface > AddOns > SmallThings, /smallthings, or the minimap cog. Settings saved per account, applied immediately. Vault stashing needs the Uncapped server pack (every player has it).
